

Vishnu C V

+91 9150600605 vishnuvenkatcrv@gmail.com wishno.me /vishnu-c-v /vishcrv Chennai, India

OBJECTIVE

Backend and LLM Engineer with experience building LLM applications and cloud-native deployments end-to-end. Seeking backend software engineering roles.

EDUCATION

- **Vellore Institute of Technology** *Chennai, India | Aug 2023 - May 2027*
B.Tech Computer Science (AI & Robotics, 3rd Year) | GPA: 8.55/10.0
- **Edison G Agoram Memorial School** *Chidambaram, India*
Grade 12: 92% (May 2023) | Grade 10: 94.4% (May 2021)

TECHNICAL SKILLS

- **Data & Analytics:** Python, Pandas, NumPy, SQL, Streamlit Dashboards, Vector Search
- **AI & LLM:** LangChain, Agentic Workflow Orchestration, LLM Orchestration, Prompt Engineering
- **Languages:** Python, Java, TypeScript, JavaScript, SQL, C, HTML, CSS
- **Backend:** FastAPI, Node.js, Express.js, REST APIs, JWT, SQLAlchemy
- **Frontend:** React, Next.js, React Native
- **Databases:** MySQL, PostgreSQL, Qdrant (Vector DB)
- **Cloud & DevOps:** Docker, Firebase Hosting, GCP (Google Cloud Run, Cloud SQL), Git, GitHub

EXPERIENCE

- **SDE Intern - Tata Consultancy Services** *Jun 2026 - Jul 2026*
 - Built a Python/Pandas pipeline scoring product descriptions against writing standards across multiple product lines, using Playwright scraping and LLM-based scoring to automate manual review
 - Aggregated compliance scores and deviation metrics into a Streamlit analytics dashboard, surfacing trends and AI-generated recommendations to support data-driven content decisions
- **Full Stack Developer Intern - Daira EdTech** *Jul 2025 - Sep 2025*
 - Partnered with product to translate feature requirements into full-stack implementations using React and FastAPI, reducing API response overhead across critical user flows
 - Shipped RESTful API endpoints and optimized database queries across dashboard, leaderboard, and quiz modules on the UPSC Yantra platform, improving learner data access

PROJECTS

- **Arkiv - Personal Book Collection Manager**
Python, FastAPI, React, Firebase Hosting, Google Cloud Run, Cloud SQL (MySQL), SQLAlchemy Core, Docker
 - Built and deployed a production web app for personal book management with OAuth authentication and persistent cloud storage, iterating the backend across four architectures (CLI → SPA → Salesforce → MySQL) based on ownership and integration trade-offs
 - Architected a cloud-native deployment pipeline (Firebase Hosting → Cloud Run → Cloud SQL) with Secret Manager, IAM roles, and Dockerized FastAPI services for reliable rollouts
- **Nucleus - Personal Link-Organizing Assistant**
Node.js, TypeScript, Hono, SQLite, React, Chrome Extension (MV3)
 - Designed a custom orchestration layer routing scraped Instagram/YouTube/X/web link data (via Apify and Open Graph) through an LLM classification agent into user-defined "spaces," with fallback and non-fatal error handling so partial pipeline failures never block a save
 - Engineered a React SPA with drag-to-reorder spaces & sub-spaces, inline YouTube embeds, and a Chrome MV3 extension for one-click saving from any tab
- **tempLLM - Browser-Bridged LLM API**
Python, FastAPI, Node.js, Playwright, Chrome DevTools Protocol (CDP)
 - Published npm CLI tool bridging free browser LLM sessions to a local REST API via CDP, eliminating API-key costs for downstream users and enabling rapid prototyping
 - Engineered FastAPI backend with streaming SSE, session management, and dual connection modes (CDP + headless Playwright), tested across Linux, macOS, and Windows

ACHIEVEMENTS

- **HackRx 6.0 (Bajaj Finserv)** - Grand Finalist | Ranked 1st in Phase 1 among 30,000+ nationwide registrations
- **Covasant AI Hackathon 2025** - Runner-up among 200+ teams with an LLM routing solution, awarded 20,000
